Sleep Disturbances

Identify the	PROBLEM : Sleep Disturbances (waking you or other family members up at night)					
Problem						
Troblem	GOAL/EXPECTED OUTCOME: To reduce sleep problems through non-pharmacological					
	approaches					
E ural aura						
<u>E</u> xplore	ASSESS FURTHER: Understand the possible triggers of the problem:					
	Is the person napping throughout the day?					
	 Does the person have too little physical activity during the day? 					
	 Is the person in pain or discomfort that may lead to awakening? 					
	 Is the temperature of the room uncomfortable? 					
	 Is there alcohol consumption or a medication that could cause rebound 					
	awakening?					
	 Is the person taking diuretics in the afternoon or evening? 					
	 Is the person consuming caffeine? 					
	 Is the person going to bed too early? 					
	 Does the person need to go to the bathroom frequently? 					
	Has the person always been more awake at night time? Did the person					
	always work a night shift?					
	Understand the possible meaning of the problem to the person with Alzheimer's:					
	• Does the person feel frightened when he/she wakes up?					
	• Does it bother the person to be up and active at night?					
	Understand the possible meaning of the problem to the caregiver:					
	 Does the caregiver feel frustrated? 					
	 Does the caregiver feel tired during the daytime? 					
	 Does the caregiver feel the person is unsafe to be up and alone at night? 					
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:					
-	Follow sleep hygiene suggestions:					
Problem	 Limit daytime naps to 15 – 30 minutes and before 3 p.m. 					
solve with	 Sleep in bed, not on couches 					
interventions	 Create a bedtime routine 					
and actions	 Only wear pajamas at night 					
	Create an appropriately active and structured daytime schedule, including					
	exercise					
	Consider enrollment in CBAS					
	Check temperature of room					
	• Check to make sure noise is limited (such as from a TV or other appliances)					
	 Avoid stimulants and diuretics after 3 p.m. (unless provider prescribed athenuice) 					
	otherwise)					
	Leave a night light in the bathroom and in the bedroom if this is comforting					
	Consider soft music Consider a comforting object such as a small stuffed animal					
	Consider a comforting object such as a small stuffed animal					

CLINICAL SUPPORT:
 Refer to PCP to assess if medical or psychiatric conditions are present and
interfering with sleep
 Speak to PCP about pain management if needed
• Speak to PCP/pharmacist about medications that may be interfering with
sleep and to evaluate medication list and schedule (to minimize sleeplessness
at night)
CAREGIVER SUPPORT AND COMMUNITY RESOURCES:
 Listen empathically to caregiver and evaluate for level of distress
 Refer to CBAS for structured daytime activities
Refer to respite services
Refer to Alzheimer's Orange County for support groups, disease education,
and care consultation
 ALZ Direct Connect[®] referral
 Provide Helpline #: 844-373-4400

additional support
NOTES:

Repetition

Idantify the	PDOPLEM : Departition (doing or coving things over and over)						
<u>Id</u> entify the Problem	PROBLEM : Repetition (doing or saying things over and over)						
TTODICITI	GOAL/EXPECTED OUTCOME: To reduce caregiver level of stress and increase caregiver						
	capacity to cope and manage behaviors						
<u>E</u> xplore	ASSESS FURTHER:						
	 Understand the possible triggers of the problem: Is the person having trouble remembering, due to the disease process? 						
	 Has the person been separated from a loved one or a personal item? 						
	 Is the person's environment new or unfamiliar? 						
	 Is the person trying to communicate an unmet need, such as needing to use 						
	the bathroom or being hungry?						
	 Is there a sight or sound causing the person anxiety? 						
	Is the environment too loud?						
	• Is the person bored?						
	 Is the person having a medication side effect? 						
	Understand the possible meaning of the problem to the person with Alzheimer's:						
	 Does the person feel anxious? 						
	Is the person confused?						
	Understand the possible meaning of the problem to the caregiver:						
	 Is the caregiver frustrated? Is the caregiver apar/2 						
	Is the caregiver angry?						
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:						
Duchland	 Understand that the person is not doing or saying things repeatedly on 						
Problem solve with	purpose; it's part of the disease						
interventions	 Be reassuring and comforting to the person, using a gentle tone of voice Avoid reminding the person that he/she already asked the question 						
and actions	 Distract the person: 						
	 Redirect with another topic (Avoid questions. Instead, say, "Tell me 						
	aboutyour wedding, your kids, your house, your work"						
	 Offer something the person enjoys, such as a favorite food, an activity 						
	or music he/she likes, etc.						
	 Have personal things for the person to look at, such as photo albums, 						
	old catalogues, a memory box of items from the person's life such as						
	 travel pictures/postcards, etc. Turn the repetitious behavior into an activity (i.e., if person is rubbing his/her 						
	 For the repetitious behavior into an activity (i.e., in person is fobbling his/her hands across the table, provide a cloth and ask for help with cleaning. Offer 						
	flowers to arrange, offer things to separate or sort into piles, or to sweep the						
	patio, etc.)						
	 Try not to become angry or frustrated in front of the person 						
	Remove things from the environment that might trigger repetitive questions,						
	such as the keys if the person keeps asking if it is time to leave						
	 Try moving the person to a different room/new environment 						
	CLINICAL SUPPORT:						
	Because repetition may be due to cognitive decline (i.e., forgetfulness), refer						
	to PCP to discuss if cognitive enhancement drugs would be beneficial						

	CAREGIVER SUPPORT AND COMMUNITY RESOURCES:						
	 Educate the caregiver about the disease and how it can cause forgetfulness 						
	and repetitive behaviors						
	 Listen empathically to caregiver and evaluate for level of distress Refer to Alzheimer's Orange County for support groups, disease education, 						
	and care consultation						
	 ALZ Direct Connect[®] referral

	NOTES:						

Sadness and/or Depression

Identify the	PROBLEM: Sadness and/or Depression (feeling blue)							
Problem	TRODELM. Sauless and/or Depression (reening bloe)							
	<u>GOAL/EXPECTED OUTCOME</u> : To reduce depression or depressive symptoms							
<u>E</u> xplore	ASSESS FURTHER: Understand the possible triggers of the problem: • What is the person's behavior like when he/she is depressed? • What happens before the person's depressive symptoms occur?							
	 How often do the person's depressive symptoms occur? For early stage individuals, is there evidence that the depression involves reaction to understanding the diagnosis? Is the depression causing the person to socially withdraw? Are there any indications of suicidality? 							
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:							
Droblom	 Consider home safety: remove firearms, alcohol, or other substances in the based 							
Problem solve with interventions	 home Provide dementia education and counseling to people in early stages Encourage the person to join a support group 							
and actions	Provide the person with predictable routines							
	Go on regular outings with the person when possible							
	 Stimulate with pleasant smells and sounds (i.e. aromatherapy, baking cookies, music from person's youth) 							
	 Help the person engage in favorite activity or hobby 							
	 Read books, play games, watch funny shows/movies Encourage exercise and physical activity 							
	CLINICAL SUPPORT:							
	 If suicidal ideation is present, follow standards of practice, polices, procedures, and reporting mandates 							
	 If self-neglect, follow standards of practice, policies, procedures, and reporting mandates 							
	 Follow clinical guidelines and procedures for depression screening, intervention and referral 							
	 Refer to behavioral health specialist for depression assessment, diagnosis and treatment, as needed 							
	Consider behavioral health referral for people in early stage							
	CAREGIVER SUPPORT AND COMMUNITY RESOURCES:							
	Listen empathically to caregiver and evaluate for level of distress							
	 Discuss opportunities for socialization, stimulation and interaction, such as CBAS 							
	 Refer to Alzheimer's Orange County for support groups, disease education, and care consultation 							
	 ALZ Direct Connect[®] referral 							
	 Provide Helpline #: 844-373-4400

<u>NOTES</u> :

Combativeness

Identify the							
Problem	GOAL/EXPECTED OUTCOME: To reduce combativeness through non-pharmacological						
	approaches						
	approacnes						
<u>E</u> xplore	ASSESS FURTHER:						
	Understand the possible triggers of the problem:						
	 Is something causing the person to feel frustrated? 						
	 Is the person overly tired? 						
	 Is the person having trouble completing a task that was once simple for 						
	him/her?						
	 Is there too much going on around the person? 						
	 Does the person have trouble seeing or hearing that is causing him/her to 						
	mistake sights and sounds?						
	 Are there too many unfamiliar people or places? 						
	 Is the person experiencing physical discomfort (pain, fever, illness)? 						
	 Is the person responding to caregiver stress and irritability? 						
	 Is the person experiencing side effects of a medication? 						
	Understand the possible meaning of the problem to the person with Alzheimer's:						
	 Is the person overwhelmed? 						
	 Does the person feel he/she is losing control? 						
	 Is the person uncomfortable? 						
	 When a person resists, says "no!" or is combative, it can mean: 						
	o Ican't						
	o l'm scared						
	 I don't understand 						
	 I never liked it and I never will 						
	Understand the possible meaning of the problem to the caregiver:						
	 Does the caregiver feel unsafe? 						
	 Is the caregiver scared? 						
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:						
<u>A</u> ujust	 You set the tone; try to use a calm, reassuring voice and avoid insults 						
Problem	 Try saying "I know you're feeling angry," to show you understand 						
solve with	 Try to avoid triggers if possible 						
interventions	 Make sure the person is comfortable; check for possible sources of pain 						
and actions	 Offer simple, step-by-step instructions for activities 						
	 Approach the person slowly from the front and introduce yourself if 						
	needed						
	 Speak slowly and clearly 						
	 Keep routines the same each day 						
	 Reduce noise, people, and clutter from the person's area 						
	 Try to learn the common causes and avoid them 						
	 Use redirection or distraction (i.e., food, activity, music) 						
	 Consider safety 						
	 Stand out of reach of the person 						
	 Leave the room if you can, to let the person calm down for a few minutes, 						
	but stay where you can still watch him/her for safety						

	 Call for help – neighbors, family, friends, doctor Call the police if needed Write down examples of the problem and possible triggers to tell the person's doctor
	 CLINICAL SUPPORT: If abuse or self-harm is suspected, follow standard of practice, policies, procedures, and reporting mandates Refer to PCP to assess for possible illness or adverse medication reactions If non-pharmacological approaches prove unsuccessful, refer to PCP for medications, targeted to specific behaviors, as clinically indicated
	 CAREGIVER SUPPORT AND COMMUNITY RESOURCES: Listen eempathically to caregiver and evaluate for level of distress Refer to Alzheimer's Orange County for support groups, disease education, and care consultation
	 FOLLOW UP: Schedule a phone call with caregiver to discuss outcomes and provide additional support
-	<u>NOTES</u> :

Hallucinations

[
<u>Id</u> entify the Problem							
	<u>GOAL/EXPECTED OUTCOME</u> : To increase caregiver's capacity to cope with and mana						
	hallucinations						
<u>E</u> xplore	ASSESS FURTHER:						
	Understand the possible triggers of the problem:						
	 Does the person not recognize his/her environment? 						
	• Does the person not recognize his/her reflection in windows or mirrors?						
	 Does the person not recognize family members/caregivers? 						
	 Is there something in the environment that upsets the person? 						
	 Has the person's routines changed? 						
	 Does the person have problems with hearing, seeing, or tasting? 						
	 Is there a problem with the person's medications? 						
	 Does the person have a physical illness, such as an infection? 						
	 Has the person recently fallen or hit his/her head? 						
	 Has the person not been eating enough or drinking enough fluids? 						
	Understand the possible meaning of the problem to the person with Alzheimer's:						
	Does the person feel frightened?						
	Does the person feel unsafe?						
	 Is the person reliving a trauma from the past? 						
	Understand the possible meaning of the problem to the caregiver:						
	 Does the caregiver feel frustrated? Does the caregiver feel like be/she does not know how to help? 						
	 Does the caregiver feel like he/she does not know how to help? 						
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:						
	Change the environment						
Problem	 Remove or adjust items that may upset the person 						
solve with	 Cover mirrors and windows if the person does not know who is in the 						
interventions and actions	mirror or window						
and actions	 Turn on lights to reduce shadows that may look frightening Turn off the TV if it is distracting. The person might also be confused 						
	 Turn off the TV if it is distracting. The person might also be confused about whether the TV episode is reality 						
	 Use contrasting colors, such as red plates on white table clothes, to 						
	help the person see differences in objects						
	 Minimize busy patterns that might appear as an obstacle or barrier 						
	 Make sure the person's glasses and/or hearing aides are on and working 						
	• Offer simple explanations, such as where sounds might be coming from						
	• Do not argue about whether what's happening is real; remember, it's real to						
	the person						
	Be comforting and reassuring; remind person that he/she is safe						
	 Go for a walk or find another enjoyable activity 						
	 Make sure the person is eating and drinking enough fluids 						
	NOTE: You may not be able to stop the experience from happening because it						
	might be part of the disease, but the goal is to help make it less scary and						
	upsetting for the person

Suspiciousness and Paranoia

· ·	
<u>Id</u> entify the Problem	PROBLEM: Suspiciousness and Paranoia (accusing, blaming)
	GOAL/EXPECTED OUTCOME: To improve caregiver capacity to cope with and manage
	behaviors of suspiciousness and paranoia
<u>E</u> xplore	ASSESS FURTHER:
	Understand the possible triggers of the problem:
	 Is the person's environment unfamiliar?
	 Are the people around the person unfamiliar to him/her?
	 Was there a change in the person's routine?
	 Has the person misplaced an item he/she is looking for?
	 Is there too much going on around the person?
	 Is the person experiencing hallucinations or delusions due to the disease?
	Understand the possible meaning of the problem to the person with Alzheimer's:
	 Is the person angry?
	 Does the person feel taken advantage of?
	 Is the person scared?
	Understand the possible meaning of the problem to the caregiver:
	 Does the caregiver feel wrongfully blamed? [It is not uncommon for people
	with the disease to accuse those who are closest to them of stealing]
	 Is the caregiver frustrated?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
-	 The source of suspicion might be real! Check it out first
Problem	 Don't take it personally; this is part of the disease
solve with	 Try to keep the person's routine the same every day
interventions	 Use a calm and gentle tone of voice; don't argue with the person
and actions	 Make sure the lighting is bright
	 Try to limit noises and distractions around the person
	Offer to help the person look for lost things
	• Learn where the person's common "hiding places" are and let other caregivers
	know
	 If the person is often looking for a specific item, have extras available (i.e.,
	multiple wallets, a canceled check, etc.)
	CLINICAL SUPPORT:
	Refer to PCP to assess for adverse effects of medications or possible medical
	or psychiatric conditions, if hallucinations or delusions are present
	If non-pharmacological approaches prove unsuccessful, refer to PCP for
	medications, targeted to specific behaviors, as clinically indicated

CAREGIVER SUPPORT AND COMMUNITY RESOURCES:
 Listen empathically to caregiver and evaluate for level of distress

NOTES:	

Disinhibition

<u>Id</u> entify the Problem	PROBLEM : Disinhibition (unwanted sexual behaviors or inappropriate behaviors)
	GOAL/EXPECTED OUTCOME: To increase caregiver capacity to understand, cope and manage disinhibited behaviors
<u>E</u> xplore	 ASSESS FURTHER: Understand the possible triggers of the problem: Is the person trying to communicate something to you? Does the person need to use the bathroom? Is the person feeling too hot or too cold? Are the person's clothes on too tightly? Is the person disoriented (i.e. thinking he/she is in the bathroom and trying to urinate)? Is the person confused by people's identities (thinking that the store clerk is his/her spouse)? Is the person confused about the time (thinking it's bed time, and taking clothes off for bed)? Does the person have an infection, such as a UTI, that could lead to itching/handling of the genital area? Understand the possible meaning of the problem to the person with Alzheimer's: Is the person lonely? Understand the possible meaning of the problem to the caregiver: Is the caregiver shocked and embarrassed? Is the caregiver angry?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
Problem solve with interventions and actions	 Try to find out if the person needs something and direct them to it, such as the bathroom, or different clothing Try not to react with disapproval or anger. Remember that this is part of the disease and the person is not doing it on purpose Don't try to reason with the person or explain that it is not appropriate behavior Ignore the behaviors when possible Be calm and reassuring when redirecting the person Try reacting to sexual behaviors by providing extra touch and affection on the person's shoulders, arm, or hand. Smile or give a hug. The person may be expressing a (non-sexual) need for affection and human contact Substitute a different pleasurable activity that may distract the person Lead the person to a private place Use a stalling tactic, such as "We will be alone soon, but let's first go out for a walk" Take strangers aside and ask that they please excuse the person; tell them that the person has dementia and is not fully aware of his/her actions or what he/she is saying (Some people make up small cards they can quietly pass to wait staff, store clerks, and others that explain this)
	 If the person frequently undresses, try using hard-to-remove clothing, such as small buttons, pants without zippers, or shirts that zip/button in the back.

(Keep in mind, however: changing familiar clothing may cause some people difficulty with toileting needs because they do not recognize how to remove the new clothes)
 CLINICAL SUPPORT: Refer to PCP to evaluate for physical illness, medication side effects or causes of discomfort/pain If non-pharmacological approaches prove unsuccessful, refer to PCP for medications, targeted to specific behaviors, as clinically indicated
 CAREGIVER SUPPORT AND COMMUNITY RESOURCES: Listen empathically to caregiver and evaluate for level of distress Refer to Alzheimer's Orange County for support groups, disease education, and care consultation
 FOLLOW UP: Schedule a phone call with caregiver to discuss outcomes and provide additional support
<u>NOTES</u> :

Resists Bathing or Showering

GOAL/EXPECTED OUTCOME: To reduce resistance to bathing or showering Explore ASSESS FURTHER: Understand the possible triggers of the problem: Does the person not recognize who you are? Does the person not recognize his or her self in the bathroom mirror Is the person scared? Is the temperature of the room uncomfortable? Is the temperature of the water uncomfortable? 	
Understand the possible triggers of the problem: • Does the person not recognize who you are? • Does the person not recognize his or her self in the bathroom mirror • Is the person scared? • Is the temperature of the room uncomfortable?	
 Does the person not recognize who you are? Does the person not recognize his or her self in the bathroom mirror Is the person scared? Is the temperature of the room uncomfortable? 	
 Does the person not recognize his or her self in the bathroom mirror Is the person scared? Is the temperature of the room uncomfortable? 	
Is the person scared?Is the temperature of the room uncomfortable?	
Is the temperature of the room uncomfortable?	?
 Is the temperature of the water uncomfortable? 	
Is there poor lighting?	
Is the person sensitive to the noise of the running water?	
Does the person have difficulty with vision or hearing?	
Is there a breakdown in communication? Does the person not under your directions?	stand
Is the person kept waiting too long while the bath is being prepared?	,
Is the person fatigued?	
Is the person in pain?	
Are the tasks involved in bathing too complicated?	
Understand the possible meaning of the problem to the person with Alzheim	
 Is the person feeling embarrassed about getting undressed in front of Is the person uncomfortable? 	or you?
Is the person uncomfortable?Is the person scared or confused?	
Understand the possible meaning of the problem to the caregiver:	
Is the caregiver frustrated?	
Adjust TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:	
Preparing the bathroom:	
Problem o Make sure the room is warm enough for the person	
solve with o Run the water so it is not too hot or too cold	
interventions o Do not use bright lights if possible	
and actions • Have a towel, clean clothing, and non-slip socks ready for us	e when
the person steps out of the tub or shower	
 Try covering the mirror if the person gets agitated around it Try playing the person's favorite calming music 	
 Iry playing the person's favorite calming music Make sure the bathroom is safe to reduce fear 	
 Use a non-slip mat in the tub or on the bathroom floor so the person 	feels
more safe	ICCIS
 Consider a tub or shower seat. Make it comfortable with a warm tow 	/el
Fill the tub with only 4 inches of water to make water seem less scan	
Communicating effectively	, ,
 Assure the person you are there to help them 	
 Use a calm and reassuring tone of voice 	
 Be direct: "Your bath is ready now," instead of "Do you wan a bath?" 	t to take
 Explain what you are doing right before you do it 	

 Use simple instructions, one at a time, and demonstrate for the person, i.e., pretend to wash your arm so the person can copy you Other Try to be patient and do not rush the person Let the person participate, by giving him/her a washcloth to use Be gentle and look for signs of pain Consider a sponge bath instead of a shower if needed If the person does not want to bathe, try at another time. Also realize that daily bathing may be too much Find the best time of the day when the person is not too tired or
anxiousGive the person as much privacy as possible, but keep safety in mind
CLINICAL SUPPORT:If the person refuses to bathe because of pain, refer to PCPDiscuss with PCP appropriate hygiene
 CAREGIVER SUPPORT AND COMMUNITY RESOURCES: Listen empathically to caregiver and evaluate for level of distress Refer to IHSS Refer to Alzheimer's Orange County for support groups, disease education, and care consultation
Schedule a phone call with caregiver to discuss outcomes and provide additional support NOTES:

Difficulty with Dressing and Grooming

Identify the	PROBLEM: Difficulty with Dressing and Grooming (brushing hair/teeth, shaving, etc.)
Problem	<u>GOAL/EXPECTED OUTCOME</u> : To reduce difficulty with bathing and grooming
<u>E</u> xplore	ASSESS FURTHER: Understand the possible triggers of the problem: • Is the task too hard or confusing (i.e., a lot of buttons)? • Are there too many steps involved? • Are there too many options for what to wear? • Does the person feel tired? • Is the room too cold? • Is there poor lighting? • Are there too many distractions around the person? • Is the person in pain? • Is the person having difficulty seeing or hearing? Understand the possible meaning of the problem to the person with Alzheimer's: • Does the person feel a lack of privacy? • Is the person fustrated or overwhelmed? • Is the person upset about needing help? • Has appearance always been important to the person? • Is the caregiver frustrated? • Is the caregiver worried about ensuring the person's lifelong value of appearance is maintained? • Does the caregiver feel the person is acting this way on purpose?
<u>A</u> djust Problem solve with interventions and actions	 TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER: Keep the routine as familiar to the person as possible Avoid delays and interruptions in the routine Encourage the person to do as much as he/she can on his/her own and then help as needed Give the person and yourself extra time for the task Demonstrate tasks for the person Use simple, step-by-step instructions Dressing: Offer the person only two options so there are not too many choices Lay out clothing in the order it needs to be put on Have clothing that is easier for the person to put on, such as slip-on shoes, cardigans, Velcro, elastic waistbands, etc. Buy clothing that is loose-fitting and comfortable, not tight If the person always wants to wear the same things, buy multiples Make sure there is enough lighting in the room Close the door and pull down the blinds to create privacy Remove distractions (TV playing, clutter, etc.) Make sure the person has his/her glasses or hearing aids and make

Grooming:
 Brush your teeth or your hair at the same time, so the person can
copy what you are doing or provide hand-over-hand assistance
 For men and shaving, use a quiet, electric razor
 Try to do the person's hair/makeup the way they always kept it
CLINICAL SUPPORT:
 If the person continues refusing to dress, groom and maintain hygiene,
have the person evaluated for possible depression
 If indicated, evaluate for possible source(s) of pain

Difficulty with Eating

ا ما م سخانه ب خام م	DRODUEN Difficulture the Entire (including charging smaller ing dental seconds)
<u>Id</u> entify the Problem	PROBLEM : Difficulty with Eating (including chewing, swallowing, dental concerns)
Problem	GOAL/EXPECTED OUTCOME: To reduce difficulty with eating
	GOAL/EXPECTED OUTCOME: TO reduce difficulty with eating
<u>E</u> xplore	ASSESS FURTHER:
	Understand the possible triggers of the problem:
	 Is the person having a side effect of a medication that affects hunger?
	 Is the person experiencing any pain or illness? Is the person constipated?
	 Does the person have any mouth discomfort, such as painful gums,
	dentures not fitting right, etc.?
	 Is the person really tired at meal time?
	 Is the person's mouth dry?
	 Are there too many steps associated with eating?
	Does the person have difficulty with chewing?
	• Does the person have trouble seeing his/her food? (The food might be the
	same color as the plate and blend in
	 Is the person eating in a place he/she does not recognize?
	 Are there too many distractions or too much noise around the person?
	 Does the person not remember to stop and eat?
	Understand the possible meaning of the problem to the person with Alzheimer's:
	 Is the person embarrassed to be fed by someone else?
	 Is the person frustrated or overwhelmed?
	Understand the possible meaning of the problem to the caregiver:
	Is the caregiver frustrated?
	Is the caregiver worried?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
<u></u>	Make mealtimes simple, relaxed, and calm
Problem	Make sure the person is comfortable
solve with	Allow ample time for eating
interventions	 Make sure the person's lips are not dry; use ChapStick as needed
and actions	 If the person wears dentures, make sure they are properly in place
	 Preparing the eating area
	 Make sure the plate is a different color from the food
	 Try to avoid patterns on placemats, plates and tablecloths. They
	can be distracting
	 Increase lighting in eating area
	 Reduce the noise and distractions around the person
	Make eating simple. Try these options:
	 Serve only one food at a time
	 Use bowls instead of plates
	 Try setting the area with only utensils that are needed for the meal
	• Plastic utensils may be too light and might break. Try to avoid them
	 Use bendable straws or cups with lids
	• Serve finger foods that are easier for the person to pick up and eat
	 Sit in front of the person when helping with eating. Use simple,
	gentle words
	For over-eating

Best Practice Care Plans have been adapted from the Alzheimer's Disease Coordinated Care for San Diego Seniors (ACCESS) Project ©2016 Alzheimer's Los Angeles

 Make sure the person is not sitting around with nothing to do. Try
redirecting to activities that the person enjoys
 Try 5 or 6 small meals a day
 Have healthy snacks available, such as apples, carrots, etc.
For under-eating
 Talk with the doctor about possible illness, pain, or medication
affects
 Check with the doctor about supplemental drinks, such as Ensure
 Offer the person a glass of juice before the meal to increase
appetite
 Try to make foods the person likes Try fooding off and food before requires to the next. Come acceler
• Try feeding all of one food before moving to the next. Some people
get confused by the change in texture or taste
 Be flexible. Let the person eat when he/she is hungry if possible
CLINICAL SUPPORT:
Have a good dental check-up of the person's gums, teeth and dentures
 Check with a doctor to see if problems with eating is a side effect of a
medication or health problem
Have vision or glasses checked
Refer to PCP to evaluate for appropriate dietary needs. Request referral for
swallowing evaluation (particularly important in later stages)
CAREGIVER SUPPORT AND COMMUNITY RESOURCES:
Listen empathically to caregiver and evaluate for level of distress
Refer to IHSS

Difficulty Using the Toilet

<u>Id</u> entify the	PROBLEM : Difficulty Using the Toilet/Incontinence (wetting, accidents)
Problem	PROBLEM : Difficulty Using the Tollet/fileOntimence (wetting, accidents)
Troblem	GOAL/EXPECTED OUTCOME: To reduce difficulty with toileting/incontinence
<u>E</u> xplore	ASSESS FURTHER:
	Understand the possible triggers of the problem:
	 Does the person have pain or an infection, such as a urinary tract infection
	(UTI)?
	 Is the person constipated?
	 Is the person getting enough to drink or drinking too much?
	Has the person had a change in medications?
	 Does the person have a chronic illness, such as diabetes, Parkinson's, stroke?
	 Does the person have trouble with vision or moving around that makes it hard to get to the bathroom in time?
	• Is the person too far from the bathroom or is the bed too high up?
	 Is it hard for the person to undress in time to use the bathroom?
	 Does the person not remember what to do once he/she is in the bathroom?
	 Is the task of going to the bathroom too hard for the person?
	Understand the possible meaning of the problem to the person with Alzheimer's:
	• Is the person embarrassed? Is there not enough privacy?
	Understand the possible meaning of the problem to the caregiver:
	Is the caregiver frustrated?
	Is the caregiver worried?
	Is the caregiver embarrassed?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
	Use a bedside commode to make toileting easier
Problem	Install grab bars or raised toilet seats to make toileting easier and safer
solve with interventions	 Maintain proper hygiene: ensure the person has wiped properly, that skin is
and actions	clean and dry, and that hands are washed
	 Immediately after an accident, make sure skin is washed and dried and clothes are changed, to avoid rashes and sores
	 Try to make the bathroom visible from where the person sits or sleeps. Keep the bathroom door open with a light on.
	• Assist the person to the bathroom regularly, before there is an accident
	Try keeping a regular bathroom schedule of after meals and before bed
	Be sure the person is drinking enough fluids, but limit fluid intake in the
	evening
	 Make steps simple and give one at a time. Explain clearly and in a gentle
	tone
	 Make clothing easy for the person to get on and off to use the bathroom, such as elastic waistbands and Velcro
	Use protective "undergarments" if needed. Change them regularly to avoid
	harming the person's skin
	Try to avoid getting frustrated or angry with the person when there are
	accidents

Give the person as much privacy as possible
CLINICAL SUPPORT:
 Refer to PCP to evaluate for any possible infections or medications that may be contributing to the incontinence If the person has a fever for more than 24 hours report it to the doctor immediately. UTIs are often accompanied by fevers and can be dangerous when untreated If the person is on a diuretic, speak to the PCP about dosage and time of day it is administered Refer to PCP to place Durable Medical Equipment (DME) order as needed Refer for Occupational Therapy evaluation

<u>NOTES</u> :

Home Safety Concerns

<u>Id</u> entify the	PROBLEM : Home Safety Concerns (falls, guns, knives, stoves, leaving the person
Problem	alone)
	GOAL/EXPECTED OUTCOME: To increase personal and home safety
<u>E</u> xplore	 ASSESS FURTHER: Has a home safety assessment been conducted? Is the person ever left alone in the home? Does the person cook on his/her own? Does the person bathe on his/her own? Does the person take medications by him/herself? Does the person smoke? Does the person have access to dangerous or hazardous items, such as medications, cleaning products, knives, guns, sharp tools, matches, etc.? Is there a lot of stuff on the floors that could be tripped over? Are there grab bars, hand rails, adjusted toilets or beds in the home? Does the person use assistive equipment, such as a wheelchair, cane, walker, or lift?
	Who would the caregiver call if he/she needed help?What would the caregiver do in an emergency?
<u>A</u> djust Problem solve with interventions and actions	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER: Prevention and safety-proofing the home is important. The goal is to make the environment safe before an accident happens. Remember: people with Alzheimer's can have compromised judgment and ordinarily "safe" and "normal" household items can become hazards (i.e., knives, appliances, cleaning products, etc.) • Consider home adjustments • Install grab bars by the toilet and in the shower • Use equipment such as hand rails, ramps, adjusted toilets or beds, wheelchair, cane, walker, and lifts, as needed • Remove things that can easily break and are not needed • Provide enough lighting (stairwells and the doorway to the bathroom should be brightly lit day and night) • Unplug the kitchen disposal • Inexpensive motion detectors can alert the caregiver when the person enters a room where they should not be or gets out of bed • Look at the floor • Remove low pieces of furniture that may not be easily seen • Don't shine or wax floors • Keep items off of the floor that can be tripped over (cords, books, toys, boxes, etc.)
	 Make sure the bathroom and kitchen floors are kept dry and avoid walking on them with wet feet Use tables and chairs that are stable enough to lean on Remove dangerous items Keep knives, scissors, guns, sharp tools, matches and lighters (and cigarettes) in a locked area

	 Keep all medications (prescriptions, vitamins, aspirin, etc.) locked up Razors and nail clippers should be locked up and out of sight Move all cleaning supplies to a high shelf or lock them away Take off stove/oven knobs; use baby locks to secure items in cabinets If total abstinence from smoking is not possible, then watch the person closely when smoking Remove potentially toxic indoor plants Don't leave the person alone. Consider safety risks, such as: Stove/oven, running water in the kitchen Running water unattended/scolding hot water in the bathroom Burning cigarettes, cigars, pipes, candles Opened or unlocked doors or gates – risk of wandering/getting lost
	 If there is any concern about possible safety issues, neglect or harm
	within the home, follow standard of practice, policies, procedures, and
	reporting mandates
	Refer to PCP for assistive equipment
	 Refer to PT/OT to ensure correct use of assistive equipment
-	CAREGIVER SUPPORT AND COMMUNITY RESOURCES:

	NOTES:

Insists on Driving

Identify the Problem	PROBLEM: Insists on Driving
	GOAL/EXPECTED OUTCOME: To increase driving safety and to be from harm
<u>E</u> xplore	ASSESS FURTHER: Understand the possible triggers of the problem:
	 Does the person see his/her car keys and think of driving?
	 Does the person see his/her car and think of driving?
	 Does the person feel he/she needs the car to get something done?
	• Does the person feel powerful by getting certain tasks done for the family?
	 Has the person always had a routine that involves driving, such as going to work or running certain errands?
	Understand the possible meaning of the problem to the person with Alzheimer's:
	• Does the person feel like he/she is losing his/her independence?
	• Does the person feel angry?
	Understand the possible meaning of the problem to the caregiver:
	 Does the caregiver feel guilty?
	 Is the caregiver scared for the person's safety?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
	 If the person tries to drive most in the morning, be prepared with other
Problem	activities during that time of day
solve with	 Offer the person other forms of safe, reliable transportation
interventions and actions	 Reassure the person that he/she will still be able to get to where he/she
and actions	needs to go
	 Park the car on another block or in a neighbor's driveway so it is not visible
	 Do not leave car keys where the person can see them
	 Replace the car keys with a set that won't actually start the car
	 Find creative reasons the person cannot drive, such as the car needs to be repaired. If the person accepts this reasoning, continue to use it
	 Try to get to the car first, so the person does not have time to get into the driver's seat before you
	 Find another way for the person to feel empowered, such as asking him/her to take control of a different activity
	 If the person insists on getting a certain task done, assure him/her that it is already taken care of and then redirect to an enjoyable activity
	CLINICAL SUPPORT:
	Refer to PCP/social worker for conversations around driving and safety
	NOTE: Providers must report the diagnosis in accordance with California law
	 Ask the person's doctor to talk with the person about driving. Sometimes it's helpful for doctors to write a "prescription" for the person to stop driving. If
	they see it written from the doctor, they might be more likely to follow the
	instructions. If this is helpful, it may need to be repeated often because the
	person may forget it happened

CAREGIVER SUPPORT AND COMMUNITY RESOURCES:
 Listen empathically to caregiver and evaluate for level of distress Refer to low cost and accessible transportation services Refer to Alzheimer's Orange County for support groups, disease education, and care consultation ALZ Direct Connect[®] referral Provide Helpline #: 844-373-4400 Website: www.alzoc.org Local Community Resources:

<u>NOTES</u> :

Takes Medicine the Wrong Way

Identify the	PROBLEM : Takes Medicine the Wrong Way
Problem	
	<u>GOAL/EXPECTED OUTCOME</u> : To improve medication management, compliance, and
	safety
E xplore	ASSESS FURTHER:
	 What medication is the person taking? Can the caregiver make a list?
	 Is there anything that is causing the person to have trouble taking medications the way they were prescribed?
	 Is the person taking medications on his/her own?
	 Is the person refusing to take medications?
	 How often does the person have trouble with medications?
	Where are the medications being kept?
	 Are all of the medications stored in the same place?
	 Has the person been showing any sudden and unusual changes in cognition
	and/or behavior?
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
D 11	As Alzheimer's disease progresses, the caregiver will need to take over medication
Problem solve with	management. Caregivers will not be able to rely on the person with Alzheimer's to take medications on his/her own
interventions	 Do not leave the person alone to take his/her medication
and actions	 Watch closely. Make sure the person:
	• Takes the right pills and the right amounts
	 Takes medications at the right times
	 Follows the directions on the medication
	Lock away medications:
	 Do not leave medications in a pill box or cup on the counter
	 Make sure all medications are out of sight and out of reach
	Talk to ALL the doctors:
	 Talk to the doctor about any medications that may have been
	prescribed by separate provider
	 Do not stop giving any medication without asking the prescribing doctor first
	 Bring all medications in a bag or box to every doctor visit
	 Include vitamins, herbs, teas, creams, and other pills from the
	drugstore
	• Ask the doctor if medications can be mixed into food or drinks
	 This may be helpful if you are having trouble getting the
	person to take his/her pills
	 Ask the person's doctor about switching to medications that last
	longer so the person does not have to take them as often
	 Ask the person's doctor about the possible side effects of each medication
	 Try setting alarms for when medications need to be taken
	 Help the person get to the pharmacy or have the medications delivered to the home

CLINICAL SUPPORT:
 Refer to PCP if there is ANY sudden and unusual change in person's cognition and/or behavior. It could be caused by a medication reaction, medication interaction, or a new illness
Refer to pharmacist to review all medications
 Refer to PCP or pharmacist to discuss any difficulties with medication administration and compliance
Refer to PCP or pharmacist to discuss alternative methods of medication
administration, such as crushing pills or longer-lasting dosages

<u>NOTES</u> :

Wanders/Gets Lost

Identify the Problem	PROBLEM: Wanders/Gets Lost
	GOAL/EXPECTED OUTCOME: To reduce wandering through non-pharmacological approaches
<u>E</u> xplore	 ASSESS FURTHER: Understand the possible triggers of the problem: Has the person recently moved to an unfamiliar place? Is the person trying to go somewhere like work, church, or home? Does the wandering happen around the same time every day? Is the person trying to meet a basic need, such as hunger or thirst? Is the person searching for the bathroom? Is the person bored? Is the person trying to get away from too much noise or an unpleasant activity? Understand the possible meaning of the problem to the person with Alzheimer's: Does the person feel lost and scared? Is he/she looking for home? Is the person confused by his/her surroundings? Is the person experiencing anxiety from too much stimulation/noise?
	 Understand the possible meaning of the problem to the caregiver: Does the caregiver feel frustrated? Is the caregiver scared for the person's safety?
<u>A</u> djust Problem solve with interventions and actions	 TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER: Be prepared: Don't leave the person alone near an unlocked door Get a Medic Alert + Safe Return® bracelet for the person Sew or write the person's name and your phone number onto clothing If the person is looking to fulfill a basic need, such as toileting, hunger, or thirst, guide the person In the early stages, cues such as signs or pictures can be placed on things such as the bathroom door so the person can more easily find things Put away items, such as coats, purses, or keys that might make the person think about leaving Cover doors/exits so they are less visible Close curtains so the person does not think about going outside Ask your neighbors to keep an eye out for the person wandering outside alone Encourage physical activity to reduce restlessness Make the home safe: Put child-proof locks on doors, gates, and windows Place locks very high or low so the person can't see or reach the
	 locks Place a bell on doors, gates, or windows so you know if they are opened Provide a distraction:

 Use positive words when you are redirecting the person. Try not to say "No, Don't, Can't, Should Not" Try saying, "Let's do this first," "Wouldn't it be fun to" "What if we" Plan activities during the time of day that the person wanders most Offer the person something he/she likes to eat Ask the person for his/her help with an activity, such as folding laundry or setting the table Sit quietly with the person and listen to music or watch TV

Long-Term Care Planning

<u>Id</u> entify the Problem	PROBLEM: Long-Term Care Planning
	GOAL/EXPECTED OUTCOME: To facilitate long-term care planning
Explore	GOAL/EXPECTED OUTCOME: To facilitate long-term care planning ASSESS FURTHER: • Does the person have capacity to make long-term care planning decisions? If so, engage the person as much as possible • What are the long-term planning issues? • Financial needs? • Legal needs? • Durable Power of Attorney for Finances? • Durable Power of Attorney for Healthcare? • Residential options (possible changes in residence?) • Finding other available caregivers? • End of life decisions? • Staying at home • Will the person be safe to remain at home with 24/7 in-home assistance? • Are there resources available to maintain living at home? (i.e., financial resources, caregiving resources, family support) • Does the person have adequate hours of in-home supportive services to assist with: • Medication management? • Overnight/daytime supervision? • ADL assistance? • IADL assistance? • IADL assistance? • IADL assistance? • Is there someone available to live with the person long-term and provide needed care for the needed hours? • Does that caregiver understand symptoms and safety concerns of caring for a person with dementia? • Long-term care out of the home • Is there any opposition to long-term car
	 Background/interests of the person you care for Does the caregiver and/or the family know about Medicaid waiver programs?

<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:
_	 Learn about different long-term care options
Problem	• Utilize respite resources, including other family members, friends, community
solve with	members, neighbors, volunteer organizations, etc., to maintain living at home
interventions	 Professional caregiver, short and long-term in-home help
and actions	 Discuss facilities that provide over-night respite
	 Discuss long term care plans with all involved caregiver and the person being
	cared for, before a crisis happens
	• Learn about and discuss the challenges of physical care in the late stages of
	the disease
	 Seek assistance from family and friends when touring facilities and making decisions
	decisions
	CLINICAL SUPPORT:
	 Refer to PCP to discuss and assess medications, medical care needs, and
	required levels of care (ongoing assessment)
	CAREGIVER SUPPORT AND COMMUNITY RESOURCES:
	Listen empathically to caregiver and evaluate for level of distress
	• Refer to Legal and Financial Planning and End-of-Life care plans, as they may
	overlap
	 Refer to Home and Community-Based Services Planning and Management
	(HCBS CPM) formerly MSSP
	Refer to Alzheimer's Orange County for support groups, disease education,
	and care consultation

	FOLLOW UP:
	 Schedule a phone call with caregiver to discuss outcomes and provide
	additional support
	NOTES:

End-of-Life Planning

Identify the	PROBLEM: End-of-Life Planning				
Problem	TROBLEM. End-or-End hanning				
	GOAL/EXPECTED OUTCOME: To increase understanding of preserving dignity at the				
	end-of-life				
<u>E</u> xplore	ASSESS FURTHER:				
-	 Does the person have capacity to make end-of-life plans? If so, engage the 				
	person in this process as much as possible to plan ahead				
	• What is the <i>person's</i> understanding of hospice care? How does the person feel				
	about hospice?				
	• What is the caregiver's understanding about the <i>person's</i> wants and needs for				
	end-of-life care? Did the person ever discuss this with the caregiver?				
	• What are the <i>caregiver's</i> wants and needs for the person he/she is caring for?				
	 Does the person have a POLST (Physician Order for Life Sustaining 				
	Treatment) on file with the medical team?				
	 Does the person have an Advanced Healthcare Directive? 				
	 Does the person have a Durable Power of Attorney for Healthcare to make 				
	end-of-life medical decisions? If so, who is making these decisions?				
	 Is there someone the caregiver trusts and feels comfortable discussing these 				
	questions with?				
	 Is the caregiver overwhelmed? 				
	 Is the caregiver confused about end-of-life care options? 				
	 What are the caregiver's cultural/religious beliefs about end-of-life? 				
<u>A</u> djust	TEACH PROBLEM-SOLVING STRATEGIES TO CAREGIVER:				
<u>A</u> djost	Complete necessary paperwork (POLST, Advanced Directives, etc.)				
Problem	 Discuss medical care decisions with family and doctors 				
solve with	• Learn about hospice care (hospice is provided to people with a life expectancy				
interventions	of 6 months or less and offers many supportive services to the person and				
and actions	family that focus on comfort and enhancing quality of life)				
	 Speak to trusted family, friends or clergy about your concerns 				
	CLINICAL SUPPORT:				
	Refer to PCP to discuss POLST, Advanced Healthcare Directive, Durable				
	Power of Attorney for Healthcare, etc.				
	Refer to doctor for discussion about end-of-life care needs for the person				
	 Refer to social worker for social/emotional support, counseling and assistance 				
	with end-of-life planning				
	 Refer family to PCP for hospice referral Suggest caregiver speak to hospice about pain/discomfort management 				
	 Encourage self-care for caregiver 				

CAREGIVER SUPPORT AND COMMUNITY RESOURCES:	
 Listen empathically to caregiver and evaluate for level of distress 	
 Identify possible informal community support systems (church/clergy, 	
neighbors, friends, family, etc.)	
Refer to local hospice services	
Refer to Alzheimer's Orange County for support groups, disease educat	ion,
and care consultation
